

Seymour Health Centre provided you with one or more of the following containers:

Sterile container (no-additive)

Stool Culture with Cary Blair medium (Pink Liquid)

Ova & Parasite with SAF Fixative (Clear Liquid)

Fill all containers provided. Do not discard liquid.

1. Urinate into the toilet if needed.

2. Place a sheet of plastic (ex. Saran Wrap™) over the toilet bowl and pass stool onto plastic wrap.

3. Use a clean bowl or sterilized bedpan as an alternate to the plastic wrap. Do not let urine or water touch the stool sample.

4. Use the spoon attached to the cap, place bloody or slimy/white (mucous) areas of the stool (if present) into the container(s). Do not overfill the container(s).

5. Add spoonful of stool until the stool (and liquid if present) reached the "FILL LINE". Tighten cap securely and shake to mix (if liquid is present).

6. Wash hands thoroughly with soap and water. Ensure name, date of birth, or Personal Health Number, date and time of collection are written on the container(s).

7. Place container(s) into plastic bag provided and seal.

8. Bring the container(s) back to the laboratory within 24 hours of collection. Delays may affect test results. Until sample can be brought back to the laboratory, store as follows:
Sterile container (no-additive) - refrigerate
Stool Culture with Cary Blair medium (Pink Liquid) - refrigerate
Ova & Parasite with SAF Fixative (Clear Liquid) – room temperature
